Summary

Backend Engineer with 3+ years of experience designing highload web applications, complex Telegram bots, and RESTful APIs. My core tech stack is built around **Python (Django, FastAPI)**, asynchronous processing (Celery, Redis), and relational database optimization (PostgreSQL). I strictly adhere to clean code principles and have practical hands-on experience in automating CI/CD pipelines using Docker and GitHub Actions. In 2026 alone, I made **1,519 contributions** on GitHub, demonstrating my continuous dedication to software engineering and problem-solving.

Work Experience

2023–Present **Backend Developer**, *@uniquepros*

- Designed and developed system architectures from scratch for an IT and SaaS agency.
- Improved overall system performance by normalizing database schemas and optimizing API endpoints.
- Successfully integrated payment gateways (Payme, Click) and various third-party external APIs.

2022–2024 **Backend Developer**, *Teamwork IT Solutions*, Uzbekistan

- **Moviy TV & AyolTaxi:** Developed the backend infrastructure for a media streaming app and a women-only taxi service, ensuring high availability and stable performance for **3,000+ active users**.
- Deployed **Django and DRF** applications on Ubuntu servers and configured secure production environments utilizing **Docker, Gunicorn, and Nginx**.

Technical Projects & SaaS

2023–Present **Slayd+ (slaydplus.uz)**, *Backend Architecture*

AI-powered presentation and content generator platform serving **100,000+ total** and **10,000+ monthly active users (MAU)**.

- **Architecture:** Built a highload, highly concurrent asynchronous API using **FastAPI** and **PostgreSQL**.
- **Background Tasks:** Migrated heavy file-processing operations to an asynchronous task queue utilizing **Celery** and **Redis** to prevent server blocking.

2024–Present **@MaklersizTopbot**, *Highload Telegram Bot*

- Engineered the backend (Aiogram) and database architecture for a real estate platform with **200,000+ total** and **13,000+ MAU**. Optimized complex SQL queries to handle high traffic efficiently.

2023–Present **SaaS & B2B Systems**, *AutoDXF & UniCRM*

- Led the architectural migration from a monolith to a modular structure and built robust REST APIs for **UniCRM** (business CRM) and **AutoDXF** (engineering automation SaaS).

2023–Present **Educational Platforms**, *Optimus Invest & Speak Flow AI*

- **Speak Flow AI (@speakflowaibot):** Designed complex Object-Relational Mapping (ORM) structures for a Learning Management System (LMS) to securely store and track user progress.

Education & Continuous Learning

2021–2022 **Data Science & AI**, *Mohirdev Bootcamp*, Uzbekistan

2020–Present **Autodidact (Self-taught)**, *Backend Engineering*

Mastered software engineering principles through official documentation, GitHub open-source practices, and building large-scale production projects.

Technical Skills

Languages **Python**, SQL, JavaScript (Basic)

Frameworks	**Django, FastAPI**, Django Rest Framework (DRF), Aiogram
Databases	**PostgreSQL**, SQLite, Redis (Caching & Message Broker)
DevOps / CI-CD	**Docker, GitHub Actions**, Nginx, Gunicorn, Linux (Ubuntu), systemd
Architecture	**RESTful API**, Asynchronous Programming, ORM, Webhooks, Background Tasks
Version Control	Git, **GitHub (1,519 commits & PRs in 2026)**
